Watson-Smith
HOUSE
by Architecture
Smith + Scully

• AUCKLAND •

A subdivided section offers the opportunity to illustrate how a house can fit within a snug site.

Photography by Patrick Reynolds

East elevation

Carolyn Smith's family house sits on a site that was created from the dissection of an existing house's long, thin, bush-covered backyard – a site that most people would take one look at and probably decide it was unable to be built on. Despite the section sloping steeply to the south and Smith having to adhere to a multiplicity of zones and rules, the compelling and defining feature of the site, for Smith, was that it was bound by a narrow stream and public reserve, rather than being built in on all four sides.

The house has been designed to follow the contours of the site and its interior quality reflects this. The entry is from the upper, northern end of the site, where the building is constructed of substantial materials. Fair-faced concrete block walls and concrete floors reflect the house's solid grounding, as well as maximising passive solar gain. The main constraints on the building platform were four 15-year-old pohutukawa trees scattered around the section. Fortunately the trees were able to be repositioned and now they sit at the bottom of the site bordering the stream, creating a dappled screen partitioning the house and the public reserve. The lower half of the house responds to the surrounding plant life and sits more lightly on the site; the bounce under one's feet due to the timber floors and pole foundations express this. Likewise, as you move back into the site at the lower level the coldness of the earth is felt through the solid materials used. Moving through the house is a tactile experience.

01 The north elevation of the Watson-Smith house, designed by Carolyn Smith of Architecture Smith + Scully.

02 The east elevation.

03 Pohutukawa trees screen the house from the public reserve.

Glazing to the east and large skylights over the stairwell and the lower living spaces let an abundance of natural light into the house. This works to avoid the potentially dark and gloomy spaces commonly associated with south-facing properties. A unique scattering of light shifts throughout the day, drawing attention to the house's natural surroundings, and heightens the connection with the exterior site despite the house having limited outlook. Because of the tightness of the site Smith has designed a relatively introverted house, and rather than creating a house you are constantly looking out of, the design focuses on creating visually and physically interesting spaces. This is a responsive house that enables a heightened awareness of architecture's internal condition. **16**

Entry level plan

Lower level plan

- 1 Entry
- 2 Garage
- 3 Family room
- 4 Bedroom
- 5 Office
- 6 Kitchen
- 7 Dining
- 8 Living
- 9 Deck
- 10 Courtyard

05

04

04 The family room on the upper level. Materials have been chosen to depict each space's relationship with the ground.

05 The hallway. Smith has taken every opportunity to get natural light into the house.

06

06 The dining space and kitchen beyond. Windows have been carefully positioned to ensure maximum privacy.

07 The lower level living space.

Practice profile

We aim to provide high quality, appropriate and thoughtful design with attention to personal service. We consider each client, brief, and site as a unique opportunity, and believe successful design will enhance people's daily lives through the quality of their environment.

Project team

Carolyn Smith, Craig Jansen

Consultants

Geo-Tech engineers: Tonkin & Taylor

Structural engineers: Harris Foster Consulting Ltd

Resource consent arborist: John Wakeling, Waitakaruru Arboretum & Sculpture Park

Pohutukawa transplantation arborists: The Specimen Tree Company

Planning consultant: John Childs

Surveyor: Dimension Surveyors

Builder

Brett Moore, Shore Developments

Subcontractors

Earthworks, foundations & concrete: Contract Landscapes

Plumber: Mt Albert Plumbing & Gas

Electrician: Bob Jones Electrical

Products

Roofing: Dimond 'Shylne' ColorSteel Maxx

External walls: GBS Group 'Express-Clad & Mini-Onduline' PBS Eterpan

Internal walls: Meranti Plywood panels feature panels; fair-faced Stephenson's Dryblock; Dulux, NZ Colour Map and Resene 'Liveswire' paint

Windows and doors: APL Vanlage Metro Series 'Bronze anodized aluminium'

Flooring: Jacobsens 'Carbonised' bamboo flooring

Climate control: Built-in active air movement fans; Escea IB850 gas fire; Warm-Up in-slab heating

Lighting: LightPlan 'Architectural Series'

Balustrading: Windsor 'Eclipse Vogue'

Dining built-in cabinetry: JKL Kitchenmakers

Kitchen fittings: JKL Kitchens cabinetry; polished stainless steel benchtop; Laminex LPL 'Oyster Linea'; Way Out West Glass splash-back; Blum 'Stephano Olivetti' recessed aluminium strip handles; Katalog 'EZO' pull-handles.

Kitchen appliances: Electrolux 'E-Line' stainless steel fridge; Brandt stainless steel dishwasher; DeLonghi gas 900 wide hob cooktop; DeLonghi wall-oven; DeLonghi multi-function microwave; Insinkerator 'ID65'; Designair rangehood

Furniture: 'Iroko' outdoor table, Bob McDonald; 'Sling' and 'Level' table and chairs, Katalog

Project areas

Site size: 598m²

Building area: 250m² (excluding decks & courtyards)

Time schedule

Design and consent: 24 months

Construction: 12 months
